

REPORT TO THE PROFESSIONAL DIVISIONS COMMITTEE

Date: 06/03/2003

Meeting Location: San Diego, CA

**Name of Division/Technical Group: Aerospace Nuclear Science and Technology
Technical Group**

Chair: Robert Singleterry

Division/technical group activities and events since last PDC meeting:

Since the last PDC meeting, the group has had to replace its secretary and gotten its vitality measures. From these vitality measures, we started to work on a topical meeting plan that might be embedded (Class III) at the ANS winter meeting in Washington DC, or it might be stand alone (Class I) in FL somewhere. Details are still being worked out. We are starting the paperwork for a Class IV topical with STAIF (Dr. El-Genk's conference that runs February every year). Also, our bylaws and planning documents are being worked on. These are necessary things to ensure our ability to advance to division status in the near future (after the topical is the current thinking).

Future activities and events:

Our major plans are to complete the documentation the group needs to be compliant with ANS requirements. We are also planning our topical meetings (a Class I/III and a Class IV). We are also looking at getting outside of ANS members to join. The topical will go a long way towards that end, but each of the EC members has been charged with getting names of people working on Aerospace stuff to join.

Motions or comments:

The group has no motions or comments except to keep up the good work looking out for our interests.
